

ACCESSIBLE DESIGN

The building is intended to be fully accessible. All of the entrances have a sloped grade that is 1:20, including those in the courtyards, so each part of the building is easy to travel through. There is one elevator for accessing the second floor and basement, and each doorway has a low threshold. 12 of the 16 rooms on the second floor are fully accessible, with five foot turning circles in the room and bathroom and necessary approaches to the sink, toilet, and shower.
